SALT BASIN × LONETREE CAPITAL

Let's take your under-utilized data to the next level, shall we?

Phase 1 Diagnostic and Value Proof Proposal

Find operational timing and opportunity, validate revenue leakage, and convert evidence into defensible portfolio value.

PREPARED EXCLUSIVELY FOR

LoneTree Capital

Prepared by Martha (Betsy) Salter · July 2026

PROPOSAL GUIDE

Table of Contents

Three decisions, six executive views, and the complete preserved proposal record.

01	**Investment Case**	Why the opportunity matters now	3
02	**Value Creation**	How operating signals become defensible value	4
03	**Phase 1 Partnership**	Bounded outputs, operator fit, and commercial structure	5
04	**Diagnostic + Value Proof**	How findings create an additional value-recovery path	6
05	**Tactical Diagnostic Design**	Claims, source systems, time scope, and proof standards	7
06	**Delivery Options**	Multi-day bootcamp or 10-day diagnostic	8
A	**Preserved Proposal Appendix**	Original experience and prior proposal revisions	9

SALT BASIN × LONETREE CAPITAL

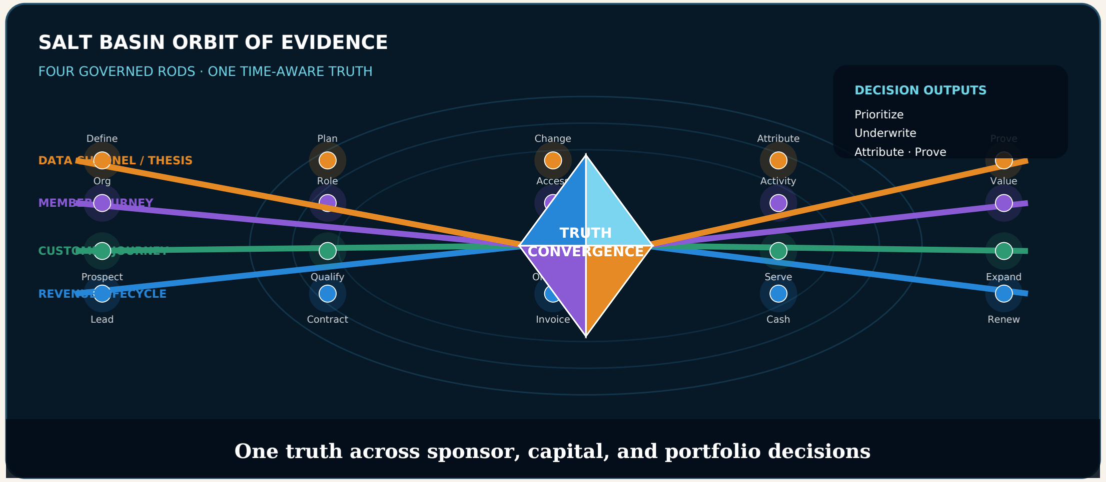
Prove the thesis. Build the evidence for what comes next.

The opportunity is larger than a CRM, reporting, or portfolio-monitoring decision. It is the ability to preserve the meaning and evidence behind business outcomes from sourcing through exit.

~400K ACCOUNT UNIVERSE

3 DECISION LAYERS

1 GOVERNED EVIDENCE CHAIN



THE EXECUTIVE OPPORTUNITY

Timing and Opportunity are found operationally before technical.

01

Fragmented pipeline

Excel, Salesforce, financing, and relationship data do not resolve to one time-aware priority view.

02

Manual reporting

Quarterly packages and iLEVEL mappings require repeated manipulation and reconciliation.

03

Definition drift

ARR, EBITDA, customer, pricing, and margin claims can change meaning across systems and periods.

04

Exit reconstruction

The value-creation story is rebuilt during diligence instead of accumulated through the hold.

THE DECISION IN ONE LINE

Validate the evidence model on LoneTree's history, then scale only where the economics and decision value are proven.

VALUE CREATION SYSTEM

From operating signals to defensible value.

Salt Basin turns the investment thesis into a persistent, testable evidence object—so the firm can prioritize, underwrite, measure, attribute, and prove with the same governed operating language.

BUILD THE PROOF WHILE VALUE IS BEING CREATED

01	**Believe**	Versioned claim
02	**Define**	Metric + evidence rules
03	**Observe**	Source events
04	**Classify**	Movement drivers
05	**Attribute**	Counterfactual + confidence
06	**Prove**	Reconciled outcome

WHAT LONETREE GETS

One method, applied to the decisions that move the fund.

FINANCIAL PERFORMANCE	Connect initiative, customer, revenue, cash, and margin movement.	**EBITDA / cash bridge by initiative**
OPERATIONAL EXCELLENCE	Expose manual effort, definition debt, and reconciliation breaks.	**Cost to Produce Truth™ baseline**
PORTFOLIO ALIGNMENT	Compare relevance, debt, risk, maturity, and evidence quality.	**Time-aware action tiers**
ORGANIC GROWTH	Trace pricing, expansion, retention, billing, and collections.	**Growth + leakage evidence map**
SUCCESSFUL EXIT	Maintain definitions, lineage, attribution, confidence, and proof.	**Current Exit Defense Package**

FOR THE FIRM · SPONSOR OPERATING LAYER

- Dynamic account + relationship prioritization
- Acquisition, financing, debt + liquidity visibility
- Quarterly claim maturity + attribution
- LP, lender + buyer diligence proof

FOR PORTCOS · LEAD-TO-CASH OPERATING PARTNER

Protect revenue · Improve cash conversion · Reduce reporting friction · Preserve outcome evidence

SCALE PATHS AFTER PHASE 1

LP OUTREACH | EVIDENCE CHAIN MANAGED SERVICES | PORTCO LEAD-TO-CASH OPTIMIZATION

PHASE 1 PARTNERSHIP

Prove the method on LoneTree's own evidence—then expand where it works.

FOUNDING BACKTEST

Historical fund thesis + selected PortCo claims

PHASE 1 APPROACH · SUCCESS IS EVIDENCE, NOT SOFTWARE ADOPTION

01 **Select**
Cases + claims

02 **Extract**
Thesis + metrics

03 **Trace**
Source evidence

04 **Reconcile**
Decision requirements

05 **Measure**
Reconstruction burden

06 **Backtest**

BOUNDED OUTPUTS

A **Thesis-to-exit map**
Belief → measure → proof

B **Truth-cost baseline**
Effort, breaks + gaps

C **Metric register**
ARR, NRR, margin + cash

D **Breakpoint heatmap**
Lineage + control failures

E **100-day opportunity map**
Prioritized actions

F **Definition blueprint**
Before APIs + automation

WHY BETSY IS THE RIGHT OPERATING PARTNER

Martha (Betsy) Salter

Strategic Operations & Revenue Systems Leader

10+ years across private equity, consulting, SaaS, healthcare technology, manufacturing, and enterprise software—including Vista Equity Partners, PwC management, and hands-on delivery at Slalom and Accenture.

14 TRANSFORMATIONS

23 INTEGRATIONS

12 BUSINESS UNITS

Sponsor-level thesis + PortCo lead-to-cash execution + one translation layer across deal team, operating partner, CFO, and systems owners.

COMMERCIAL STRUCTURE

Engagement fixed fee dependent on scope and number of company participants.

TO START
1. Name GP sponsor + data owners
2. Select historical cases
3. Confirm participants, access + timing

PHASE 1 DIAGNOSTIC + VALUE PROOF

Diagnose the leakage. Prove the value. Fund what works.

Phase 1 now includes a bounded diagnostic that converts the workbook's external risk hypotheses into company-specific findings. A separately scoped value-proof layer can then quantify recovered revenue, cash, margin, cycle-time, and evidence quality for an additional fee.

1

Hypothesis

Translate workbook scenarios into testable claims.

2

Diagnostic

Trace process, data, controls, and exceptions.

3

Validation

Reconcile samples to contracts, billing, cash, and GL.

4

Value proof

Baseline, implement, measure, and substantiate recovery.

DIAGNOSTIC OUTPUTS INCLUDED IN PHASE 1

- Leakage hypothesis and claim register
- Lead-to-cash process and system map
- Data quality, control, and exception heatmap
- Sample-based quantified findings with confidence
- Value Recovery Initiatives roadmap

OPTIONAL ADDITIONAL-FEE VALUE PROOF

Prove realized economics after the diagnostic.

Establish the baseline, support selected recovery initiatives, and validate realized impact against authoritative source events. Commercial terms depend on initiative scope, measurement period, access, and participating companies.

Commercial principle: benchmarks frame where to look; participating-company data determines what is provable and what value can be claimed.

TACTICAL DIAGNOSTIC DESIGN

Every leakage claim must resolve to an authoritative event trail.

Requested data is a prerequisite—not a promise that every system will be perfect. The diagnostic uses the longest reliable lookback available, with a preferred 24–36 months and a

CLAIM / TEST	SOURCE EVENTS	LIKELY SYSTEM	TIME SCOPE	PROOF STANDARD
Price escalation / discount	Signed terms, amendments, price books, invoices	CLM / e-sign; CPQ; billing	24–36 months + renewals	Contracted vs billed rate by effective date
Usage / tier mismatch	Usage events, meter outputs, tier config, credits	Product / data warehouse; billing	12–24 months; full cycles	Rated usage vs invoice line and cash
Amendment divergence	Document history, CRM changes, billing audit log	CLM; CRM; billing	Full active contract history	Signed change vs system configuration
Unbilled / delayed revenue	Orders, fulfillment, invoices, AR aging, cash	ERP; PSA / product; billing; bank	12–24 months + open items	Earned / delivered vs billed / collected
Revenue / margin claim	Invoices, credits, rev rec, JE detail, COA mapping	Billing; rev rec; ERP / GL	24–36 months; monthly grain	Source event → subledger → GL → KPI

STANDARD DATA REQUEST

Customer/account master · opportunity/quote/order · contract and amendments · subscription/entitlement · usage/fulfillment · billing configuration · invoices/credits · AR/cash/application · revenue schedules · JE detail and COA · product/price master · audit logs · reporting definitions · exception files

TWO PHASE 1 DELIVERY OPTIONS

Choose the participation model that creates the strongest evidence.

Both options begin with the same prerequisite data request. Final fixed fee depends on scope, data complexity, duration, and number of company participants.

OPTION 1 · MULTI-DAY LEAD-TO-CASH BOOTCAMP

Best portfolio learning per session

Preferred participation: sponsor firm + bank / capital partner + 1–3 PortCos for maximum comparative value and a group fixed fee.

- Prerequisite data delivered in advance
- Planning session: initial findings, attendees, agenda, schedule
- Multi-day walkthrough of end-to-end lead-to-cash
- Pain points, exception paths, risk and control areas
- Cross-company patterns + Value Recovery Initiatives

OPTION 2 · 10-DAY DIAGNOSTIC

Deeper company-specific validation

Base scope: sponsor firm + one PortCo. Additional PortCos or extended interviews require revised scope and commercial terms.

DAYS 1–5 Interview the lead-to-cash process end to end while synthesizing the requested data, definitions, controls, exceptions, and preliminary leakage findings.

DAYS 6–10 Refine deliverables, validate findings with owners, quantify defensible opportunity ranges, and finalize the Value Recovery Initiatives roadmap.

Shared readiness gate: data availability review → initial analytical scan → planning session → confirmed participants and calendars → working sessions. Gaps are logged explicitly and reflected in confidence, not hidden.

APPENDIX · PRESERVED PROPOSAL RECORD

Original experience and prior proposal revisions

The following 48 pages are preserved in full from the original Salt Basin × LoneTree End-to-End Thesis Proposal Extended. They remain available as supporting architecture, methodology, illustrative exhibits, prior scope concepts, and revision history. The six executive views above govern the current Phase 1 narrative and commercial framing.

REVISION CONTROL

Current executive front matter + complete original appendix

SALT BASIN × LONETREE CAPITAL

From Thesis to Defensible Value

An end-to-end operating thesis for prioritization, underwriting, value creation, evidence attribution, financing visibility and exit defense.

PRIORITIZE | UNDERWRITE | MEASURE | ATTRIBUTE | PROVE

FOUNDING / DESIGN-PARTNER PROPOSAL

Prepared by Martha (Betsy) Salter
Salt Basin Holdings

WORKING HYPOTHESIS • JULY 2026

The opportunity is larger than a CRM, reporting, or portfolio-monitoring decision.

LoneTree's stated pain points connect to one underlying question: can the firm preserve the meaning and evidence behind business outcomes as they move across the investment lifecycle?

400K ACCOUNTS → FOCUSED ATTENTION

Prioritize companies and relationships when debt maturity, covenant state, valuation, hold age, growth, margin or financing patterns make them newly relevant.

PIPELINES → CAPITAL DECISIONS

Connect acquisition and financing pipelines so target relevance, lender fit, debt capacity, terms and transaction outcomes can be compared.

PORTCOS → DEFENSIBLE OUTCOMES

Trace customer, contract, pricing, billing, cash, GL and operating events into value-creation outcomes and thesis evidence.

Salt Basin's thesis

The first win is not another dashboard. It is a shared, time-aware operating language that makes prioritization, underwriting, quarterly reporting, value attribution and exit claims reproducible.

ONE PLATFORM • ONE TRUTH • PROVEN IMPACT

Technology follows definition. Existing systems can remain in place while Salt Basin governs meaning, lineage, evidence and cross-system convergence.

Salt Basin turns the investment thesis into a persistent, testable evidence object.

Instead of waiting until exit to reconstruct why ARR, EBITDA, margin or cash changed, the evidence chain is built while value is being created.

1 BELIEVE

IC thesis becomes a versioned Claim Object.

2 DEFINE

Metric, population, formula, exclusions and evidence rules.

3 OBSERVE

Customer, contract, pricing, usage, invoice, cash and GL events.

4 CLASSIFY

Price, volume, mix, churn, add-on and other movements.

5 ATTRIBUTE

Counterfactuals, competing drivers, eligibility and confidence.

6 PROVE

Reconciled outcome and continuously maintained Exit Defense Package.

The differentiated output is not “ARR increased $6.26M.”

It is: how much movement occurred, how much was eligible, what competing explanations existed, what evidence was missing, and how much impact is currently defensible—with confidence and temporal lineage.

The proposal is to prove the method on LoneTree's own evidence—then expand where the economics are strongest.

The valuation-multiple relationship remains a hypothesis to validate, not a guaranteed outcome.

FOUNDING BACKTEST

10 business days • 2–3 historical deals

Extract material IC claims. Trace quarterly and iLEVEL/Excel evidence. Compare exit CIM requirements. Measure reconstruction burden. Backtest what earlier definition could have avoided.

ACTIVE PORTFOLIO BASELINE

Define claim-level evidence maturity, Cost to Produce Truth™, customer and revenue lineage, debt maturity overlays, reporting reconciliation, and a 100-day opportunity map.

SPONSOR OPERATING LAYER

Scale the methodology across account prioritization, acquisition pipeline, financing pipeline, value-creation tracking, underwriting evidence and exit defense through Salt Basin products and agents.

Testable outcome chain

Stronger definitions + preserved lineage + lower reconstruction burden + more reproducible outcomes → potentially lower perceived uncertainty and stronger valuation support.

01

LoneTree operating context

What we heard, the root-cause hypothesis, and why the opportunity spans both sponsor-level prioritization and portfolio-company evidence.

The pain sounds operational before it sounds technical.

The existing proposal identified Excel + Salesforce pipeline dependency, a separate financing pipeline, manual quarterly reporting, iLEVEL mapping issues and a potential Salesforce exit decision.

Pipeline in Excel + Salesforce	**Manual manipulation and inconsistent field discipline**	**Prioritize the right accounts and conversations**
Separate financing pipeline	**Lender relationship and deal data may not connect to terms or outcomes**	**Know which capital relationships actually work**
Quarterly manual reporting	**Portcos repackage data into sponsor templates**	**Reduce rework and improve confidence**
iLEVEL mapping issues	**Bottom-up data may not align to sponsor definitions**	**Reconcile fund, portco and lender views**
Salesforce exit consideration	**A system change can preserve ambiguity if definitions are not fixed first**	**Avoid rebuilding definition debt**

The reconciliation problem probably starts before iLEVEL.

If customer/account identifiers, contract lineage, pricing terms, invoice/payment events, journal-entry granularity and COA mappings are not aligned, downstream tools inherit ambiguity.

MISSING LINEAGE

Summary financial results cannot explain which customer, contract or business event changed the outcome.

TEMPLATE DRIFT

Excel becomes hidden transformation logic rather than a controlled reporting output.

MAPPING DEBT

Downstream portfolio tools receive numbers without enough business context to explain them.

400,000 companies are only useful if relevance can change over time.

Salt Basin can connect external market signals and relationship history through LoneTree-specific relevance logic.

UNIVERSE

~400K accounts

External company intelligence

Relationship history

Prior pass reasons

Sponsor / ownership context

DYNAMIC SIGNALS

Debt maturity
Covenant state
Valuation change

Last contact
Growth / margin shift
Financing pattern
Leadership / system volatility

LONETREE LOGIC

Strategic fit
Return profile
Operational maturity
Risk / volatility
Evidence quality
Capital need
Timing relevance

ACTIONABLE TIERS

Tier 1: Invest & grow
Tier 2: Develop / improve
Tier 3: Monitor / maintain
Tier 4: Exit / deprioritize

Human attention goes where circumstances changed.

Acquisition and financing pipelines should remain distinct—but become analytically connected.

The objective is not to collapse two workflows. It is to compare their risk-adjusted economics and evidence on a common decision layer.

ACQUISITION PIPELINE

Target screening • strategic fit • financial fit / synergy • integration readiness • deal scorecard • post-merger value tracking

Question: who fits the thesis, and what measurable value can be created?

FINANCING PIPELINE

Debt capacity / headroom • debt maturity ladder • covenant restrictions • refinance / reprice options • lender fit • cash-flow forecasting

Question: what capital structure and financing relationship best supports the thesis?

CAPITAL ALLOCATION ENGINE

Defensible data definitions can improve the reproducibility of underwriting.

The near-term claim is easier underwriting and financing analysis—not guaranteed better pricing or a higher multiple.

DEFINED

ARR, NRR, EBITDA, concentration, churn, cash and debt terms have governed meanings.

REPRODUCIBLE

Formula, population, source, effective period and calculation version are retained.

RECONCILED

Contract, invoice, revenue, AR, cash, GL and debt activity are tested across systems.

EXPLAINABLE

Movement is tied to customer, contract and operating events rather than only period-end values.

DEFENSIBLE

Assumptions, exceptions, evidence gaps and confidence are explicit for lenders, IC and buyers.

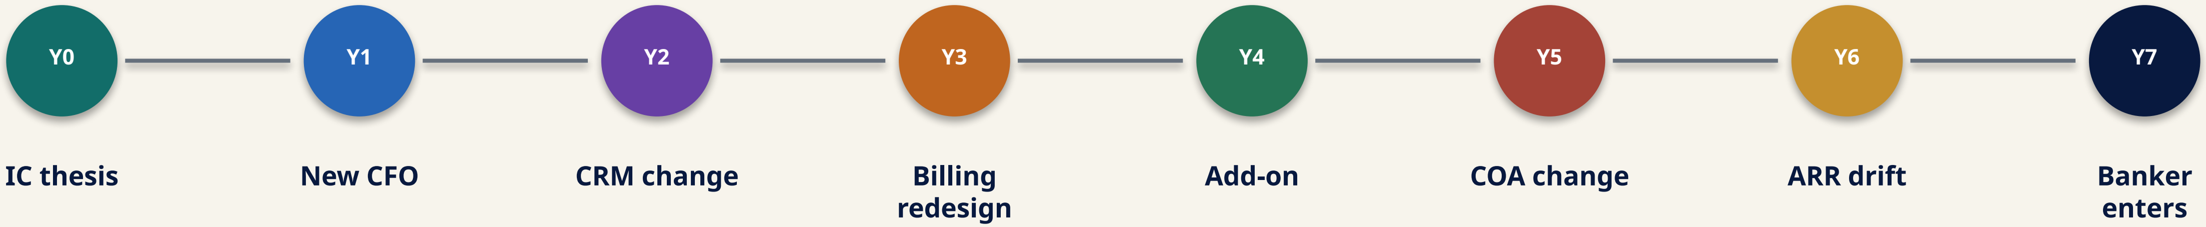
Potential measurable outcomes to test: fewer underwriting follow-ups • faster lender response • lower metric reproduction time • fewer unexplained adjustments • clearer covenant and debt-capacity analysis.

The thesis evidence operating model

Cost to Produce Truth™, claim-level maturity, evidence chains, attribution and the time dimension across a seven-year hold.

The question is not whether the data exists. The question is whether its meaning survived.

A longer hold expands the evidence reconstruction surface.



THE EXIT QUESTION

"Show us seven years of ARR movement by customer cohort and explain the value-creation drivers."

A simple buyer question can become a cross-system reconstruction project if definitions, versions, events and evidence did not travel with the numbers.

Cost to Produce Truth™ measures the economic burden of making a material outcome defensible.

Baseline it at acquisition. Reduce it during the hold. Prove the improvement at exit.

MANUAL EFFORT

Hours and FTE burden

RECONCILIATION

Breaks and rework

DEFINITION DEBT

Conflicts and versions

DATA REMEDIATION

Backlog and mapping

KEY-PERSON RISK

Knowledge concentration

EVIDENCE GAPS

Untraceable claims

BASELINE AT ACQUISITION — REDUCE DURING HOLD — PROVE AT EXIT

The unit of maturity is the business claim—not the company.

ARR can be mature as a definition and still be weak as evidence. Operational volatility can also pull a claim backward.

0 ASSERTED

Someone reports it.

1 DEFINED

Meaning agreed.

2 REPRODUCIBLE

Formula + population known.

3 RECONCILED

Cross-system consistency tested.

4 EXPLAINABLE

Movement tied to business events.

5 OUTCOME VALIDATED

Backtested against outcomes.

Signals that can weaken the evidence chain

- Leadership turnover
- System change
- Billing redesign
- Add-on acquisition
- Manual data erosion
- Resource constraints
- Exit time pressure

The documents already form a lifecycle. The opportunity is to preserve meaning as numbers move through them.

Salt Basin enriches—not replaces—the prelim model, Quick Look, LOI, IC memo, quarterly reporting and exit CIM.

PRELIM MODEL
Initial economics

QUICK LOOK
Early IC view

LOI
Conditional intent

IC MEMO
Underwritten thesis

QUARTERLY
Hold measurement

EXIT CIM
Buyer story

ENRICHMENT LAYER

Definition • Formula • Population • Source • Evidence owner • Effective date • Version • Adjustment state • Reconciliation status • Reason for change • Confidence • Lineage

The goal is to preserve what the number meant, why it changed, and what evidence supported it at each point in time.

Every material thesis claim receives explicit proof requirements.

The POC's pricing-transformation example exposes where a claim can be defined and measured but still weak in causal attribution.

1 THESIS

What did we believe?

2 DEFINITION

What exactly counts?

3 MEASUREMENT

How is it calculated?

4 SOURCE EVENT

What actually changed?

5 RECONCILIATION

Does it tie out?

6 EXPLANATION

What moved?

7 ATTRIBUTION

Why did it happen?

8 OUTCOME

What was the financial impact?

9 EXIT CLAIM

Can we defend it?

Weakest-link logic: a strong formula cannot compensate for missing amendment lineage; a reconciled ARR bridge cannot prove the initiative caused the movement.

The thesis becomes a versioned belief object—not narrative trapped in an IC memo.

Salt Basin preserves what management actually believed at the time and prevents the thesis from being rewritten after the result is known.

TH-001 • PRICING TRANSFORMATION

Literal thesis: implement a governed pricing model to reduce discount leakage and drive $4.0M of incremental ARR while improving gross margin by 150 bps over five years.

Start: 2027-01-01
Expected lag: 6 months
Primary metric: Attributed ARR
Secondary: Discount %, Gross Margin

GOVERNED CLAIM METADATA

- Claim ID + thesis version
- Literal thesis statement
- Owner + organizational owner
- Status + priority
- Created / effective / target dates
- Time horizon + expected lag
- Target metric + target value
- Supporting metrics
- Assumptions + success criteria
- Baseline period
- Eligibility rules
- Confidence requirement
- Exit evidence requirement

Classification is not attribution.

An Initiative_ID attached to an amendment does not prove that the initiative caused the economic result.

OBSERVED
MOVEMENT
$6.26M price effect

ELIGIBLE
MOVEMENT
$4.83M

COMPETING
DRIVERS
$(0.62)M

INSUFFICIENT
BASELINE
$(0.30)M

DEFENSIBLE
ATTRIBUTION
$3.91M @ 81%

ATTRIBUTION LOGIC

Claim → candidate driver → counterfactual → evidence → competing driver → allocation rule → confidence → approval → temporal validity.

The “currently defensible attributed impact” can change as new evidence arrives while historical determinations remain preserved.

What would reasonably have happened without the initiative?

Salt Basin does not need to claim perfect scientific causality. It needs a transparent, governed attribution methodology.

- **Historical price-increase behavior**
- **Market price movement / inflation**
- **Competitor pricing**
- **Contractual escalators**
- **Customer and product mix**
- **Acquisition population changes**
- **Baseline retention behavior**
- **Sales capacity changes**
- **General market demand**
- **Unrelated commercial programs**

DEFENSIBLE ATTRIBUTION ≠ ARTIFICIAL CERTAINTY

Preserve the selected counterfactual method, supporting evidence, known limitations, competing explanations and confidence. Make the reasoning reproducible and challengeable.

Entity existence is not the same as portfolio inclusion, financial consolidation, thesis eligibility or attribution eligibility.

The time dimension is part of the data model—not a reporting filter added later.

ENTITY VALID	When the entity exists in master data	effective_from → effective_to
PORTFOLIO INCLUSION	When it belongs to the portfolio economic perimeter	effective_from → effective_to
FINANCIAL CONSOLIDATION	When results enter consolidated financial reporting	effective_from → effective_to
THESIS ELIGIBILITY	When the entity or event qualifies for the thesis population	effective_from → effective_to
ATTRIBUTION ELIGIBILITY	When observed movement can be allocated to the initiative	effective_from → effective_to

03

Churn Offset: (9%)
Add-On: 16%

6. HOW THIS SOLVES FOR LONETREE'S PRIORITIES

- **Prioritize Customers & Assets** — Scorecards rank customers by return, maturity, risk & growth.
- **Better Underwriting & Easier Financing** — Defensible EBITDA, cash flow & debt metrics → stronger underwriting confidence.
- **Debt Maturity Visibility** — Overlay debt maturities, covenants, headroom & refinance windows.
- **Financing vs Acquisition Pipeline** — Compare risk-adjusted returns of financing opportunities vs acquisition targets.
- **400K Accounts → Focused List** — Universe → score → tiers → ~5-10K focused → ~500 investable.
- **Value Creation Tracking** — Initiatives linked to outcomes with time-stamped evidence & measurable impact.

7. SALT BASIN DIFFERENTIATORS THAT MAKE THIS POSSIBLE

- **Three Data Rods** — Ensure end-to-end truth across commercial, customer & member dimensions.
- **Crystal Atom Model** — Every element has one source of truth, lineage, time, state & confidence.
- **Evidence Chain Engine** — Links claims to outcomes with immutable proof.
- **Dynamic Journey Agents** — Model changes, branches, merges, and lineage.
- **Data Basin® Layer** — Governed semantic layer across all systems (no rip & replace).

SALT BASIN TURNS SPREADSHEETS INTO DEFENSIBLE, TIME-STAMPED, SOURCE-LINKED TRUTH. ⟶ MORE CONFIDENCE. LOWER RISK. STRONGER STORY. HIGHER VALUATION MULTIPLE.

THESIS PROVEN → VALUE UNLOCKED
That is how we build a higher valuation multiple at exit.

HOW THE ORBIT WORKS (ILLUSTRATIVE)
1. INGEST
Events flow in from source systems across the enterprise.
ERP • CRM • Billing
CPQ • HRIS • Excel
Files • APIs & More
2. STANDARDIZE
Data is normalized, deduplicated and structured.
Formats • Codes
Units • Entities
Reference Data
3. MODEL TO RODS
Data is mapped to the right rod and atom types.
Revenue • Customer
Member • Thesis
Data Channel
4. CLASSIFY & SCORE
Movements are classified by driver and scored.
Price • Volume • Mix
Churn • Add-On
Inherit • Other
5. ATTRIBUTE
Movements are attributed to initiatives with confidence.
Attribution Logic
Competing Drivers
Confidence Score
6. ACCUMULATE EVIDENCE
Evidence and approvals accumulate over time and across rods.
Documents • Approvals
Data Proof • Metrics
Third Parties
7. CONVERGE
Rods converge in the orbit to produce one version of truth.
Aligned • Reconciled
Time-Aware • Scored
Defensible
THE CONVERGENCE EFFECT (ILLUSTRATIVE)
WHAT CONVERGENCE DELIVERS (ILLUSTRATIVE)
Single Source of Defensible Truth
Cross-Rod Reconciliation
Time-Aware & Versioned
Attribution with Confidence
Evidence-Backed Outcomes
Audit & Exit Defense Ready
Higher Valuation Confidence
THE RESULT:
From Data in Motion → To Defensible Value
From Questions → To Proof
DATA CHANNEL ROD (THESIS) DEEP DIVE (ILLUSTRATIVE)
THESIS DEFINED
State the belief and expected outcome.
INITIATIVE PLANNED
Define the plan, scope and targets.
CHANGES IMPLEMENTED
Capture operational changes and dates.
MOVEMENT CLASSIFIED
Classify financial movement by driver.
ATTRIBUTION RECONCILED
Attribute movement to the initiative.
EVIDENCE ACCUMULATED
Collect evidence, approvals and proof.
Each step creates atoms. Atoms form molecules. Molecules roll up to the Data Channel Rod.
The rod converges with other rods to prove the value creation thesis.
OPERATIONAL REPORTING TIED TO THE ORBIT (ILLUSTRATIVE)
Operational dashboards pull governed, converged data from the orbit in real time.

ILLUSTRATIVE
PRINCIPLES OF THE ORBIT
Persistent: Every claim has a persistent object.
Governed: Attribution is methodical, not manual.
Time-Aware: Every atom knows when.
Evidence-Backed: Proof beats opinion.
Convergent: Multiple inputs, one truth.
Defensible: Built for diligence, audit and exit.
ALL ELEMENTS, SCORES, FLOWS, AND OUTCOMES ARE ILLUSTRATIVE.
NOT ACTUAL RESULTS OR GUARANTEED OUTCOMES.

The spreadsheet proves the business concept; the target model makes the relationships persistent, temporal and governable.

The mapping workbook translates flat tables and implied IDs into explicit objects, lineage and agent/security behavior.

THESIS REGISTER	**Claim Object + Thesis Version + Target + Assumption**	Persistent belief and proof requirement
CONTRACT AMENDMENTS	**Commercial Event Atom + Contract Term Atom + Pricing Version Lineage**	Prior term → amended term → effective-time lineage
TRANSACTIONS	**Source Event Atom + Financial Event Atom**	What actually happened in source systems
PERIOD MATH	**Metric Observation + Calculation Version + Period Snapshot**	Reproducible period-specific metrics
INITIATIVE ATTRIBUTION	**Attribution Object + Driver Molecule + Claim-to-Event Link**	Causation test rather than correlation
EVIDENCE + MATURITY	**Evidence Requirement + Validation + Maturity + Volatility Signals**	Weakest-link and dynamic evidence state

The three operational rods remain always on; the Data Channel Rod carries thesis, attribution and evidence truth.

A single pricing amendment can change commercial truth, customer state, entitlement or usage state, and the evidence supporting a thesis claim.

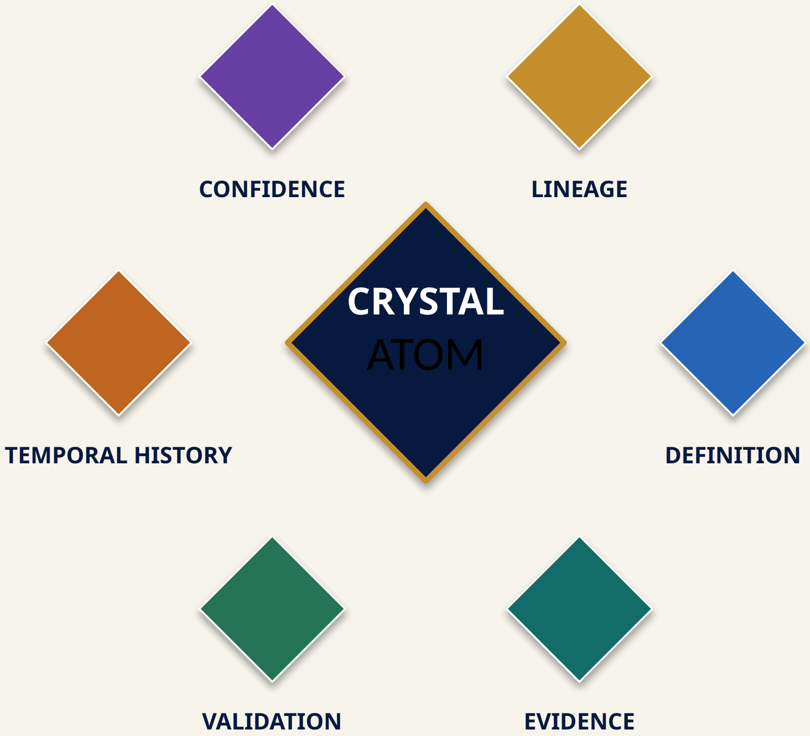
Rod	Flow	Truth
REVENUE LIFECYCLE ROD	Lead → Quote → Contract → Order → Bill → Collect → Recognize → Renew / Adjust	Commercial / financial truth
CUSTOMER JOURNEY ROD	Prospect → Qualify → Negotiate → Sign → Onboard → Active → Service / Usage → Renew / Risk	End-to-end customer truth
MEMBER JOURNEY ROD	Organization → User → Role / Entitlement → Access → Product → Activity → Support → Change / Churn	People / participant truth
DATA CHANNEL ROD	Thesis Defined → Initiative Planned → Changes Implemented → Movement Classified → Attribution Reconciled → Evidence Accumulated → Exit Defense	Thesis / evidence truth

CONVERGENCE

Revenue Truth + Customer Truth +

Geometry represents bounded metadata—not decoration.

Each atom owns one bounded definition, evidence rule, validation state, temporal history, confidence and lineage.



DATA MODEL HIERARCHY

ATOM — smallest unit of governed truth

MOLECULE — atoms grouped into a business capability

CLUSTER — domain / aggregate grouping

ROD — end-to-end journey and state progression

ORBIT — cross-rod convergence into enterprise truth

One TH-001 price amendment explodes into a full evidence path.

The target model can answer which customer, contract, prior term, amended term, pricing version, source evidence and downstream financial events support the claim.

COMMERCIAL EVENT

Debt ↔ Debt activity

Covenant headroom

The same event can traverse multiple rods. Cross-rod convergence determines the governed state rendered in dashboards and the Exit Defense Package.

Dashboards render governed state; they are not where truth is manually interpreted.

The architecture is Data Atoms → Molecules → Rods → Classification → Attribution → Evidence → Convergence → Governed State → Dashboard.

THESIS IMPACT

ONE GOVERNED STATE

Aligned • Reconciled • Time-aware • Scored • Defensible

From operating signals to measurable outcomes

How Salt Basin products and methodology map to LoneTree priorities, financing, customer prioritization and value creation.

Salt Basin products should be described by the outcome they enable—not by feature inventory.

Each outcome is produced through a specific methodology and product responsibility.

Prioritize customers & accounts	Signal Detection + Dynamic Relevance	Operating Reality Lens + Dashboards / Agents	400K universe → focused, time-sensitive tiers
Improve underwriting	Definition + Reconciliation + Evidence Maturity	Data Basin + Evidence Chain Engine	Reproducible metrics, fewer unexplained adjustments
Strengthen financing visibility	Debt / Covenant Event Modeling + Scenario Analysis	Journey Data Rods + Dynamic Journey Agents	Debt maturity ladder, headroom, refinance windows
Prove value creation	Thesis Definition + Attribution + Counterfactual	Thesis Ledger + Evidence Chain Engine	Currently defensible attributed impact
Improve ARR / NRR sustainability	Journey Modeling + Revenue Pattern Intelligence	Revenue Engine OS + Journey Data Rods	Price / volume / mix / churn / add-on movement
Reduce reporting burden	Governed Semantic Layer + Metric Versioning	Data Basin + Dashboards / Agents	Repeatable source-to-output reporting
Build exit defense	Evidence Accumulation + Convergence	Evidence Chain + Orbit + Thesis Ledger	Continuously maintained Exit Defense Package
Test data ROI	Cost Tracking + Benefit Observation	Cost Basis & Data ROI Model	Cost to Produce Truth baseline and payback test

The evidence chain should follow both operating change and customer change over time.

A thesis is only defensible if the path from initiative to customer / contract event to financial movement remains explainable.

Sustainability
Exit evidence
package

Time is explicit: created_at • event_at • effective_from/to • accounting period • stage entry/exit • duration • freshness • review / expiry • restatement history.

Measure the cost basis of reusable evidence without asserting accounting asset recognition.

The test is whether investment in definitions, lineage, controls and temporal evidence produces measurable operating benefit and stronger decision support.

PEOPLE & PROCESS

$250K illustrative

Owners, definitions, policies, operating model

SYSTEMS & INTEGRATIONS

$300K illustrative

Reliable flows, lineage, automated reconciliation

DEFINITIONS & LINEAGE

$150K illustrative

Versioned definitions, mappings, evidence chain

DATA QUALITY & CONTROLS

$150K illustrative

Rules, monitoring and remediation

$850K ILLUSTRATIVE ECONOMIC COST BASIS

Benefit observations to test

Reporting cycle time • rework hours • reconciliation exceptions • metric reproduction time • leakage recovered • buyer questions • diligence response time • evidence reconstruction avoided

A higher valuation multiple is the hypothesis to prove—not a claim to make upfront.

Enterprise-value arithmetic is formulaic. The causal relationship between evidence strength and realized multiple requires empirical validation.

WEAK EVIDENCE

10× illustrative multiple

$20M EBITDA

Definitions drift • attribution weak • buyer reconstruction required

STANDARD EVIDENCE

11× illustrative multiple

$20M EBITDA

Metrics reproducible and reconciled • attribution partially supported

STRONG EVIDENCE

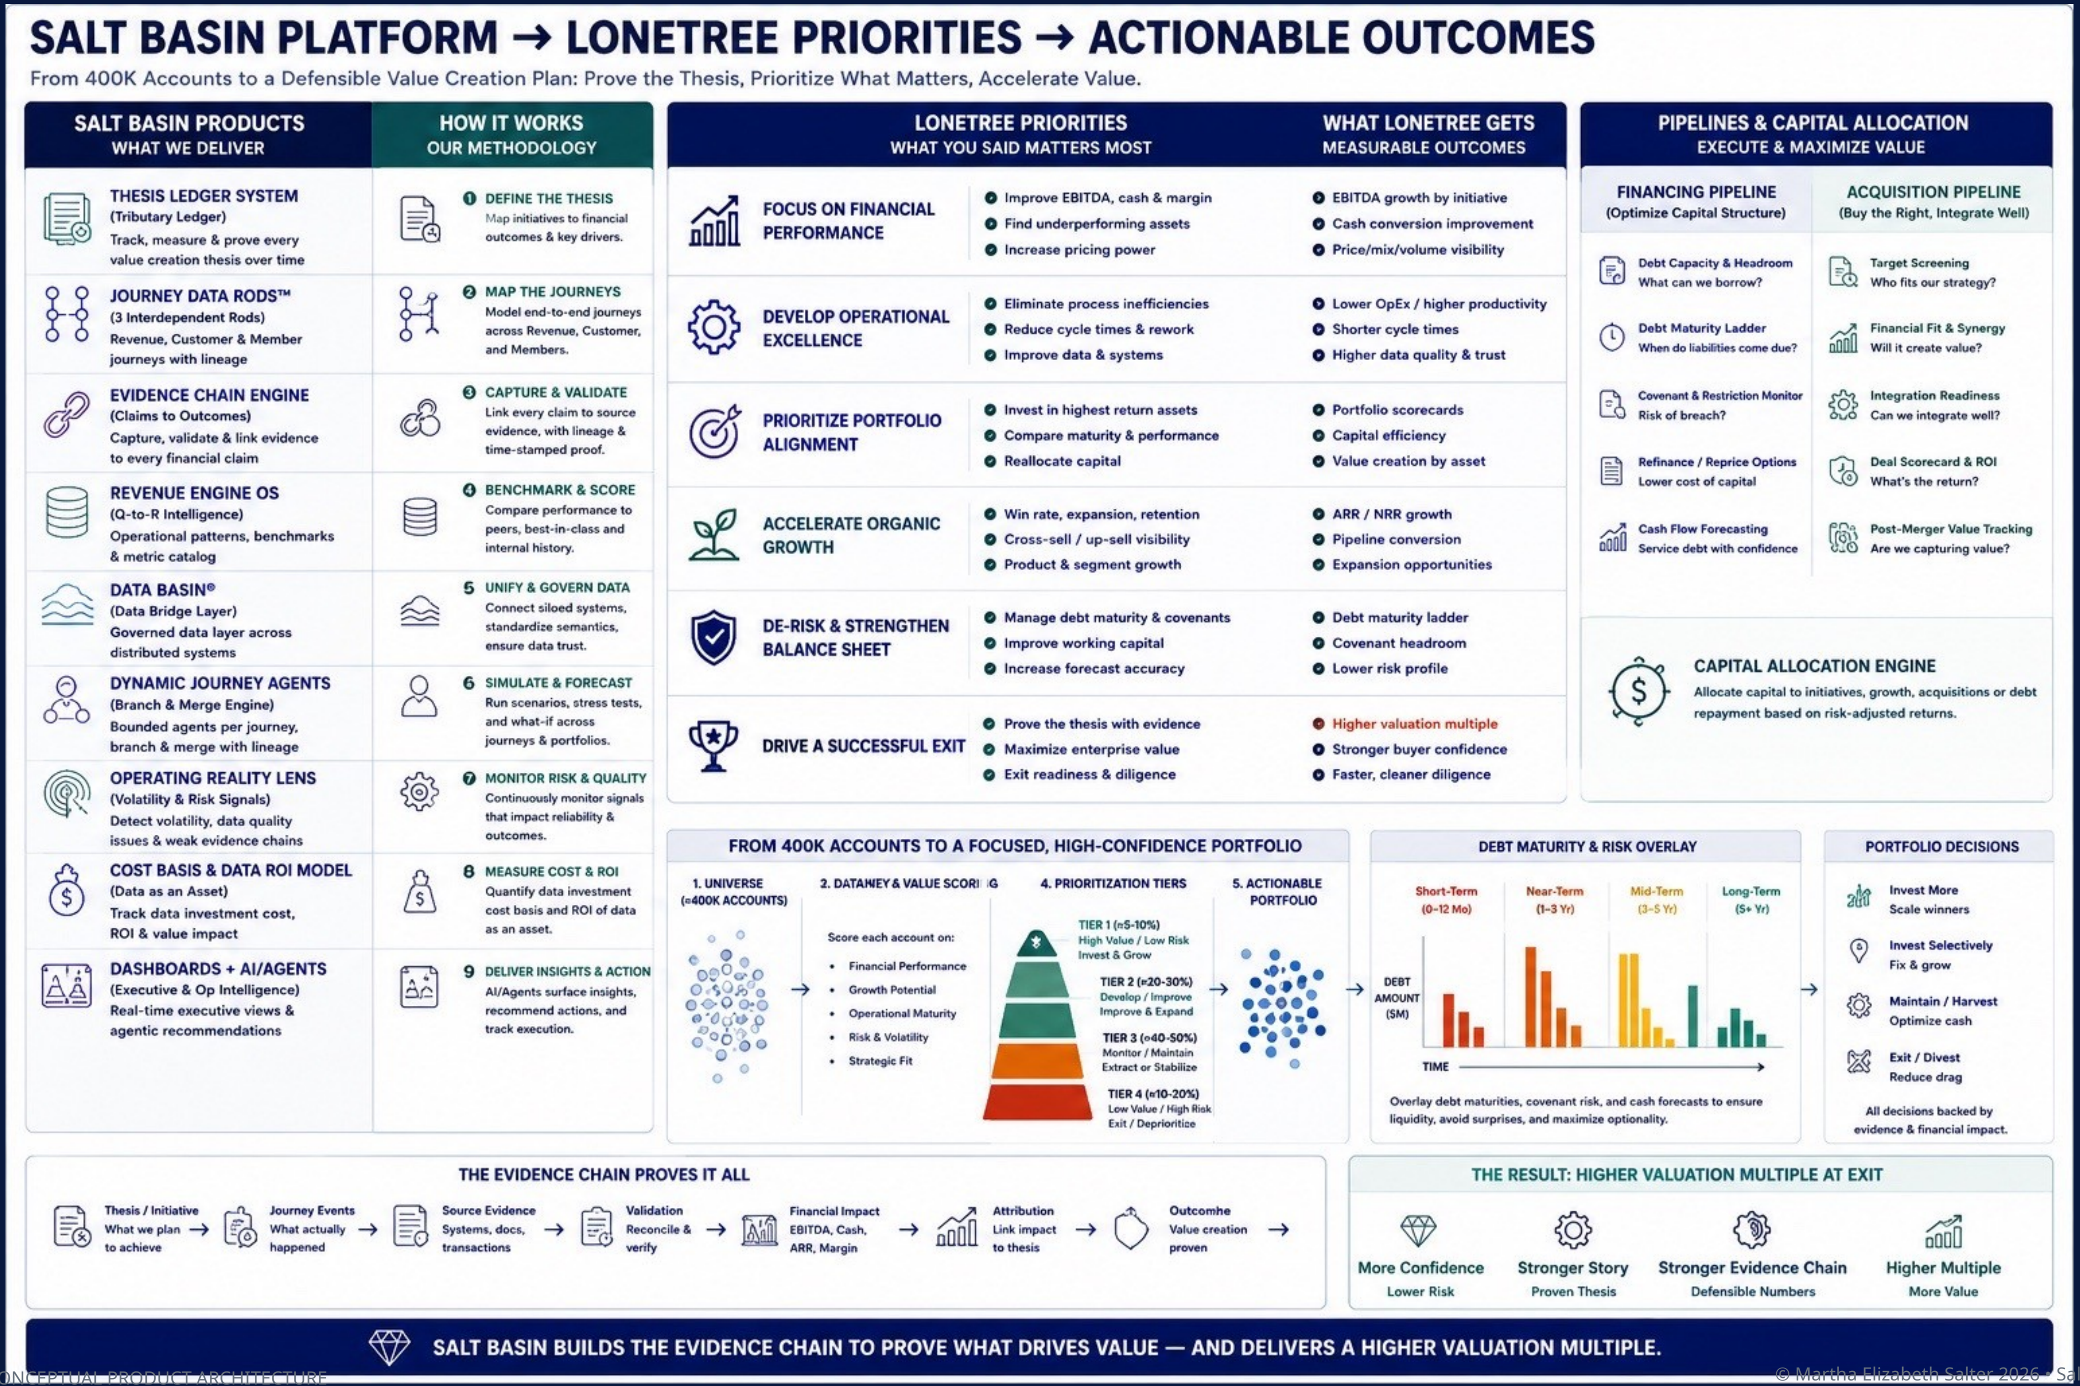
12× illustrative multiple

$20M EBITDA

Thesis-to-outcome chain reproducible • temporal lineage and driver attribution supported

Illustrative arithmetic: 10× → 12× at $20M EBITDA = $40M enterprise-value spread.

What must be backtested: diligence friction • QoE adjustments • buyer risk commentary • financing terms • bid dispersion • retrade frequency • final pricing rationale • growth / margin / sector / leverage / market controls.



ILLUSTRATIVE / CONCEPTUAL PRODUCT ARCHITECTURE

05

Founding engagement and path to scale

Prove the evidence thesis first, quantify the operating burden, then expand into active portfolio and sponsor workflows.

Backtest the hypothesis on LoneTree's own completed deals.

Historical outcomes let Salt Basin test the method before asking LoneTree to adopt a new platform.

01 SELECT
2–3 historical investments

02 EXTRACT
Material IC thesis claims

03 TRACE
Quarterly + iLEVEL / Excel evidence

04 COMPARE
Exit CIM evidence requirements

05 MEASURE
Reconstruction + reconciliation burden

06 BACKTEST
What earlier definition could have avoided

Success is evidence—not software adoption.

10 BUSINESS DAYS • 2–3 HISTORICAL DEALS • $20K FIXED FEE

A bounded output designed to make the hypothesis measurable.

The pilot should produce both a LoneTree operating artifact and a Salt Basin methodology backtest.

THESIS-TO-EXIT EVIDENCE MAP

What was believed → measured → ultimately needed

COST TO PRODUCE TRUTH BASELINE

Manual effort, breaks, definition debt and evidence gaps

METRIC EVIDENCE REGISTER

ARR, NRR, concentration, margin and thesis-specific claims

BREAKPOINT HEATMAP

Where lineage, reconciliation or definitions failed

100-DAY OPPORTUNITY MAP

Actions that improve evidence and operating outcomes

MINIMUM-DEFINITION BLUEPRINT

Business definitions required before API or platform automation

OPTIONAL HIGH-VALUE EXTENSION

One anonymized portco data pack to test revenue leakage, customer / contract lineage and source-event reconciliation.

One hypothesis. Multiple commercial entry points.

The same methodology can be applied at different moments without becoming a binary buy / don't-buy screen.

1 • HISTORICAL BACKTEST

Prove the methodology.

Where did the evidence chain break? What had to be rebuilt? What earlier definition could have avoided the burden?

2 • EXISTING PORTCO BASELINE

Define exit evidence earlier.

Measure claim maturity, revenue lineage, debt / covenant visibility, reporting reconciliation and Cost to Produce Truth.

3 • PRE-ACQUISITION BASELINE

Measure what the buyer inherits.

Define the operational evidence environment at purchase and what measurable success should look like coming out.

DEFINE → MAP → VALIDATE → AUTOMATE

API-first or platform-first is a sequencing decision—not the first question.

Clean and leverage existing systems before deciding what should be replaced.

DEFINE

Metric, population, formula and evidence rule

MAP

PitchBook, Salesforce, Excel, iLEVEL and accounting

VALIDATE

Reproduce and reconcile the outcome

AUTOMATE

API, agent or platform workflow

API-FIRST

Embed governed definitions, calculations, lineage and agent actions into current workflows.

PLATFORM-FIRST

Create a shared evidence workspace, 3D Orbit, visual lineage and cross-portco operating model.

What did we believe?

What did we measure?
What did we ultimately need to prove?

Let's test where the evidence chain broke—and whether preserving it earlier changes the operating economics of the hold and the defensibility of the exit story.

10 BUSINESS DAYS | **2–3 HISTORICAL DEALS** | **$20K FIXED FEE** | **FOUNDING DESIGN PARTNER**

Martha (Betsy) Salter / Salt Basin Holdings

APPENDIX

Detailed architecture, data objects, evidence rules and proposal caveats

Core logical object model

The POC-to-data-model mapping implies a governed object layer beyond flat spreadsheet IDs.

Thesis Claim	Thesis Version	Thesis Assumption	Thesis Target	Initiative	Change Event
Economic Movement	Movement Classification	Attribution	Candidate Driver	Competing Driver	Counterfactual
Attribution Allocation	Evidence	Evidence Requirement	Evidence Validation	Confidence State	Approval
Population Eligibility	Economic Perimeter	Rod State	Rod Maturity	Convergence State	Exit Defense Package

Required temporal / lineage metadata: created timestamp/by • effective from/to • updated timestamp/by • version • source system + source record reference • current / prior state • confidence • validation state • evidence references • lineage references.

Minimum data inputs to make the diagnostic real

The request is lightweight enough to start but structured enough to produce a defensible buyer-facing output.

PIPELINE	Current Salesforce export • Excel deal tracker • target-company list • lender / bank tracker • fields + stage definitions
PORTCO REPORTING	Quarterly templates • last two reporting cycles • iLEVEL exports / mappings • manual adjustment log
FINANCE	COA • trial balance • JE detail • revenue accounts • AR • cash • debt activity
LEAD-TO-CASH	Customer / account list • contracts • pricing terms • invoices • credits • payments • renewals • churn / expansion logs
GOVERNANCE	Owners • cadence • approvals • definitions • permissions • cloud / server constraints • reporting recipients

Agent-centric security and distributed semantic projection

Salt Basin should preserve agent context and lineage while respecting native source-system permissions and user entitlements.

PER-AGENT POLICY

Permitted source systems
Allowed transformations
Memory retention
Exposure rules
Action permissions
Evidence / lineage scope

USER / ORG SLICE

Identity
Organization
Role / profile slice
Consent
Read entitlement
Write entitlement
Propose / stage / commit rights

DISTRIBUTED DATA

Sensitive data may remain source-side.

Agents invoke scoped native-permission queries and transformations.

Salt Basin aggregates only authorized outputs, metadata and evidence references.

Recommended immediate build sequence

Operational reporting should be driven only from converged governed states.

1. Formalize Claim Object schema and thesis versioning rules.
2. Define Economic Movement and Movement Classification objects.
3. Define Attribution Object and candidate / competing-driver model.
4. Define Counterfactual Object.
5. Build the time-aware Evidence Allocation Engine.
6. Define confidence calculations at atom, molecule, rod and convergence levels.
7. Map Claim / Attribution / Evidence objects to crystal atom types.
8. Define exact data-driven geometric rendering rules.
9. Build the Data Channel Rod state machine.
10. Build cross-rod convergence and reconciliation rules.
11. Drive operational reporting only from converged governed states.
12. Generate an automated Exit Defense Package from the evidence graph.

Claims, caveats and evidence posture

The proposal should distinguish what is observed, hypothesized, illustrative and empirically proven.

WHAT NOT TO CLAIM

- Stronger evidence guarantees valuation uplift.
- Fewer banker hours automatically reduce success fees.
- Salt Basin replaces market positioning, buyer access or process expertise.
- Synthetic POC values are actual LoneTree or portfolio results.
- Economic data cost basis automatically qualifies for accounting asset recognition.

WHAT TO TEST

- Evidence reconstruction avoided.
- CFO / deal-team burden reduced.
- Buyer diligence response time improved.
- Material metrics become more reproducible.
- Underwriting follow-ups and unexplained adjustments decline.
- Stronger evidence is associated with lower perceived uncertainty after controlling for other variables.

LABELING STANDARD

ILLUSTRATIVE / SYNTHETIC POC DATA — NOT ACTUAL COMPANY RESULTS.

ILLUSTRATIVE HYPOTHESIS — RELATIONSHIP TO VALUATION REQUIRES EMPIRICAL VALIDATION.

Client-provided system and process context must be confirmed during discovery.

EXAMPLE: TH-001 PRICING TRANSFORMATION CLAIM → SALT BASIN DATA MODEL

From POC Excel Row to Defensible Evidence Chain Across 3 Data Rods Over 7 Years

PROVEN → PRIORITIZED → PROVED
Evidence turns data into enterprise value.

1. FROM POC EXCEL (SOURCE)

Sheet: Claims Register + Drivers + Transactions

Claims_Register (Example Row)

Price: 50%
Volume: 29%
Mix: 13%
Churn Offset: (9%)
Add-On: 16%

6. HOW THIS SOLVES FOR LONETREE'S PRIORITIES

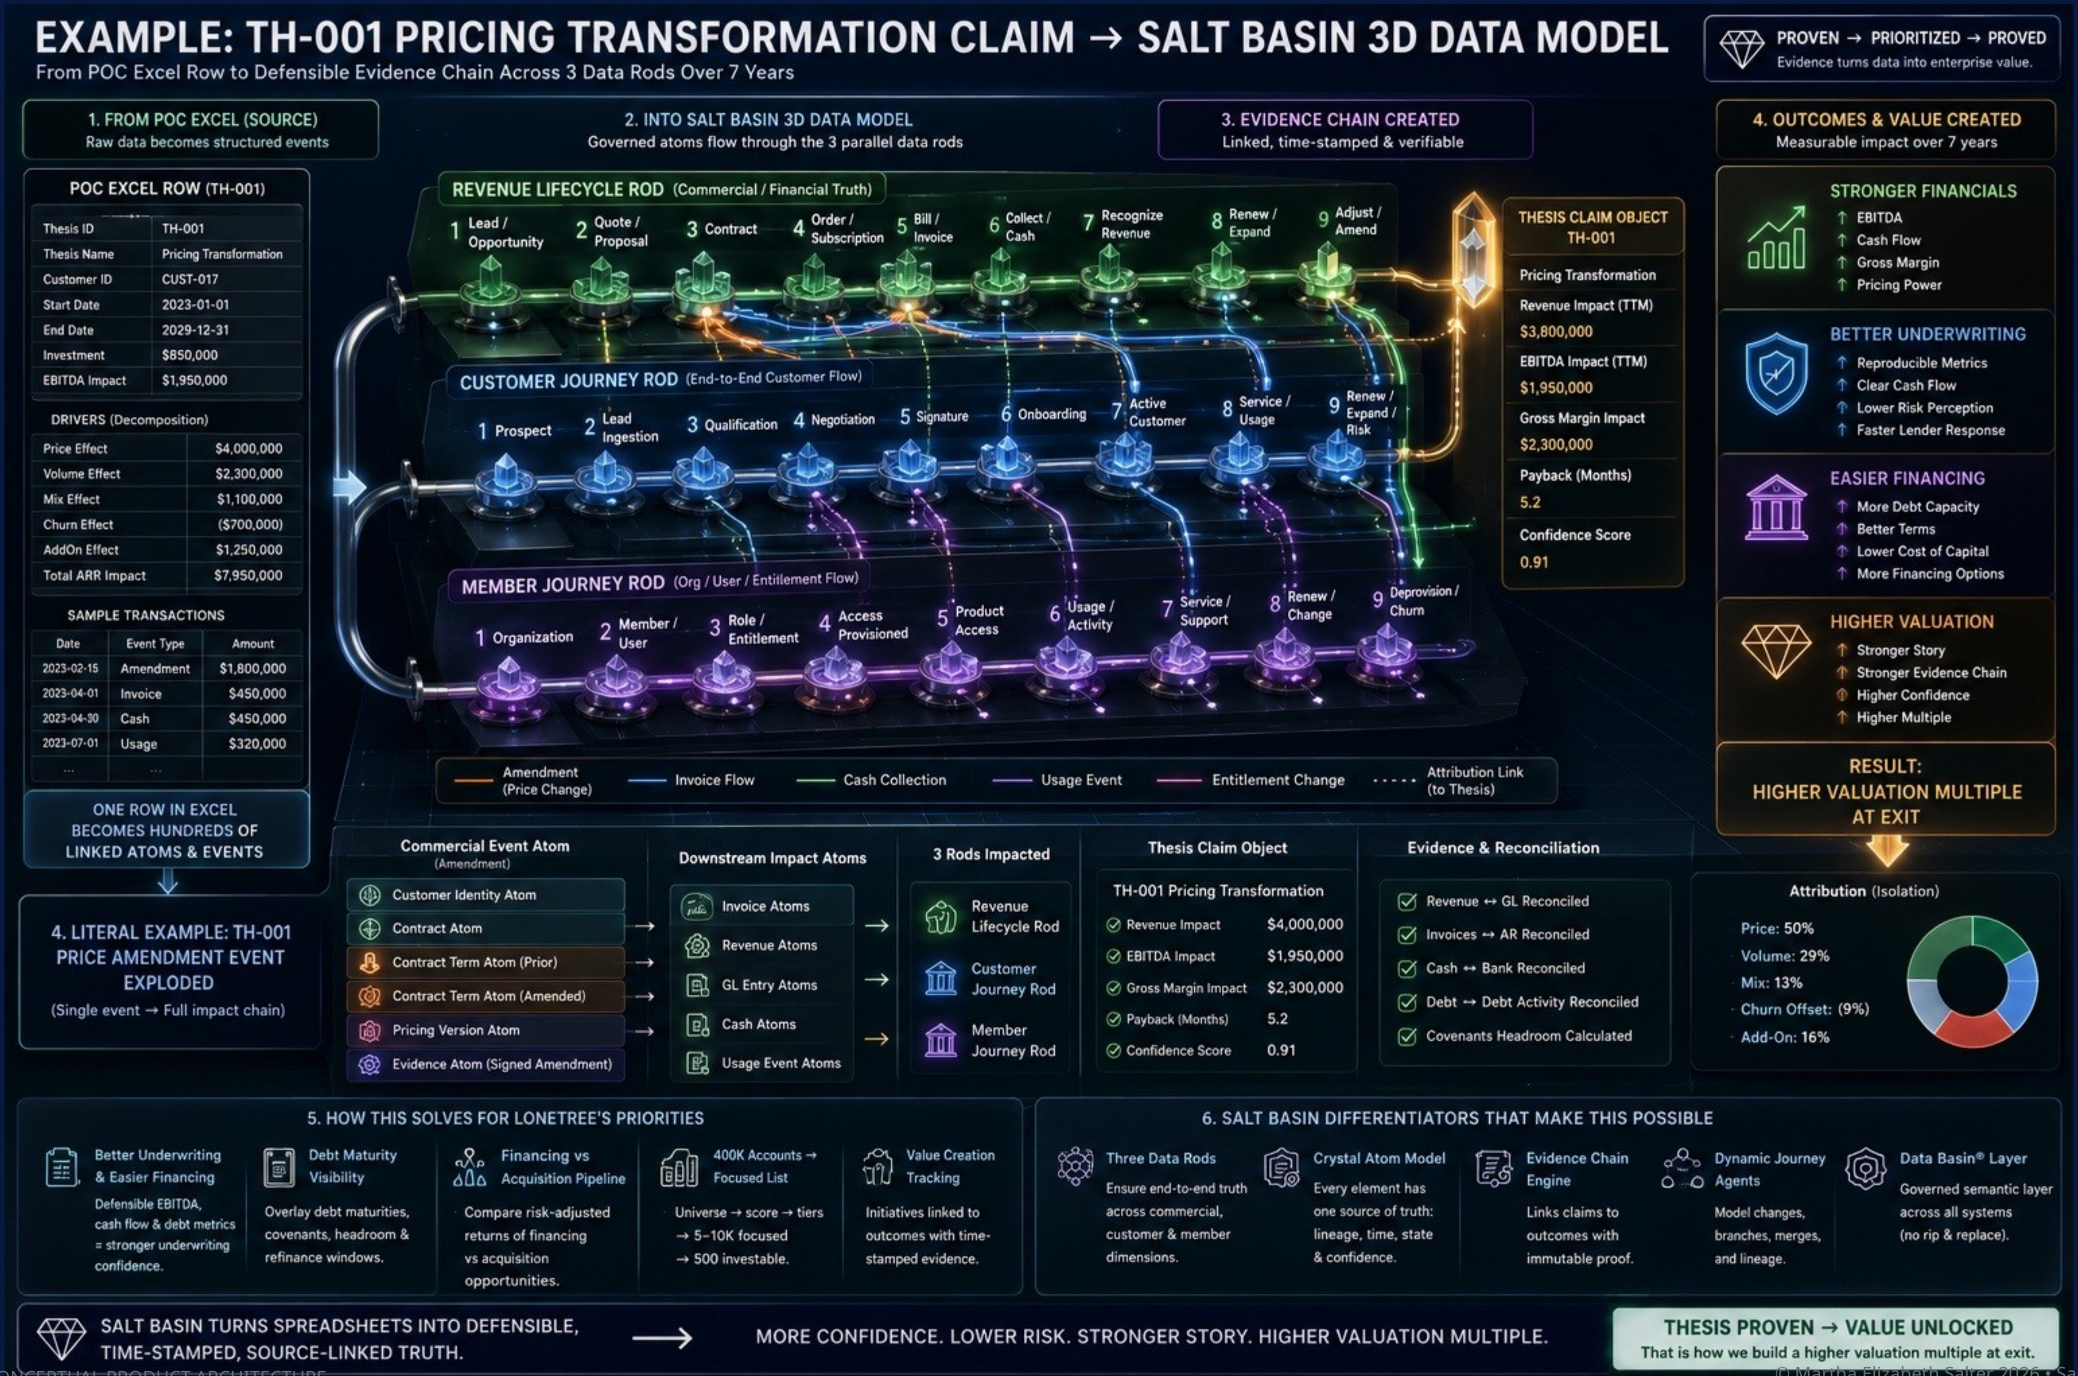
- **Prioritize Customers & Assets** — Scorecards rank customers by return, maturity, risk & growth.
- **Better Underwriting & Easier Financing** — Defensible EBITDA, cash flow & debt metrics → stronger underwriting confidence.
- **Debt Maturity Visibility** — Overlay debt maturities, covenants, headroom & refinance windows.
- **Financing vs Acquisition Pipeline** — Compare risk-adjusted returns of financing opportunities vs acquisition targets.
- **400K Accounts → Focused List** — Universe → score → tiers → ~5-10K focused → ~500 investable.
- **Value Creation Tracking** — Initiatives linked to outcomes with time-stamped evidence & measurable impact.

7. SALT BASIN DIFFERENTIATORS THAT MAKE THIS POSSIBLE

- **Three Data Rods** — Ensure end-to-end truth across commercial, customer & member dimensions.
- **Crystal Atom Model** — Every element has one source of truth, lineage, time, state & confidence.
- **Evidence Chain Engine** — Links claims to outcomes with immutable proof.
- **Dynamic Journey Agents** — Model changes, branches, merges, and lineage.
- **Data Basin® Layer** — Governed semantic layer across all systems (no rip & replace).

SALT BASIN TURNS SPREADSHEETS INTO DEFENSIBLE, TIME-STAMPED, SOURCE-LINKED TRUTH. → MORE CONFIDENCE. LOWER RISK. STRONGER STORY. HIGHER VALUATION MULTIPLE.

THESIS PROVEN → VALUE UNLOCKED
That is how we build a higher valuation multiple at exit.



EXAMPLE: TH-001 PRICING TRANSFORMATION CLAIM → SALT BASIN 3D DATA MODEL

HIGHER VALUATION
↑ Stronger Story
↑ Stronger Evidence Chain
↑ Higher Confidence
↑ Higher Multiple
RESULT: HIGHER VALUATION MULTIPLE AT EXIT
4. LITERAL EXAMPLE: TH-001 PRICE AMENDMENT EVENT EXPLODED

3 Rods Impacted
Revenue Lifecycle Rod
Customer Journey Rod
Member Journey Rod
Thesis Claim Object
TH-001 Pricing Transformation
Revenue Impact $4,000,000
EBITDA Impact $1,950,000
Gross Margin Impact $2,300,000
Payback (Months) 5.2
Confidence Score 0.91
Evidence & Reconciliation
Revenue ↔ GL Reconciled
Invoices ↔ AR Reconciled
Cash ↔ Bank Reconciled
Debt ↔ Debt Activity Reconciled
Covenants Headroom Calculated
Attribution (Isolation)
Price: 50%
Volume: 29%
Mix: 13%
Churn Offset: (9%)
Add-On: 16%
5. HOW THIS SOLVES FOR LONETREE'S PRIORITIES
Better Underwriting & Easier Financing
Defensible EBITDA, cash flow & debt metrics = stronger underwriting confidence.
Debt Maturity Visibility
Overlay debt maturities, covenants, headroom & refinance windows.
Financing vs Acquisition Pipeline
Compare risk-adjusted returns of financing vs acquisition opportunities.
400K Accounts → Focused List
Universe → score → tiers → 5–10K focused → 500 investable.
Value Creation Tracking
Initiatives linked to outcomes with time-stamped evidence.
6. SALT BASIN DIFFERENTIATORS THAT MAKE THIS POSSIBLE
Three Data Rods
Ensure end-to-end truth across commercial, customer & member dimensions.
Crystal Atom Model
Every element has one source of truth: lineage, time, state & confidence.
Evidence Chain Engine
Links claims to outcomes with immutable proof.
Dynamic Journey Agents
Model changes, branches, merges, and lineage.
Data Basin® Layer
Governed semantic layer across all systems (no rip & replace).
SALT BASIN TURNS SPREADSHEETS INTO DEFENSIBLE, TIME-STAMPED, SOURCE-LINKED TRUTH.
MORE CONFIDENCE. LOWER RISK. STRONGER STORY. HIGHER VALUATION MULTIPLE.
THESIS PROVEN → VALUE UNLOCKED
That is how we build a higher valuation multiple at exit.
