CASE STUDY #01 · INTERNAL · 10-12 PERSON TEAM

Blackbaud – Salesforce CRM & Apttus CPQ Implementation

Blackbaud Nonprofit Technology / EdTech 2013–2015

ROLES

Champion Stakeholder Super User Process & Integration Design

BUSINESS CONTEXT / PROBLEM

Blackbaud's contract processing team was relying on legacy SalesLogix CRM and Clarify entitlement systems that could not scale with deal volume or complexity. Month-end deal processing was creating 10+ hours of overtime per person on a 10–12 person team — a recurring, costly inefficiency rooted in manual, disconnected workflows.

WHAT BETSY DID

Betsy was named implementation champion for the Salesforce CRM and Apttus CPQ rollout. She contributed to business process and integration design, authored training deliverables for the full team, upskilled sales team members on the new system, and participated in Kaizen and Lean Six Sigma workshops to identify and eliminate non-value-add process steps in the contract-to-order workflow. She also built SAP integration design inputs ensuring downstream accuracy.

BUSINESS OUTCOMES

- Reduced month-end team overtime by ~4 hours/person on a 10–12 person team (significant at inflated overtime rates)
- Sunset legacy SalesLogix CRM and Clarify entitlement systems; full Salesforce CRM + Apttus CPQ adoption achieved
- Enabled scalable deal processing with SAP integration for clean downstream handoff to finance
- Earned promotion to Senior Contract Processing Specialist ~1 year in based on performance and implementation leadership

KEY METRICS

~4 hrs/person/month overtime reduction 10–12 person team enabled 2 legacy systems sunset

SCENARIOS & THEMES

CRM Modernization Team Enablement Sales Operations Transformation Legacy System Migration

CASE STUDY #02 · \$50M+ TOTAL PROGRAM · 60+ PERSON TEAM AT PEAK

Global Enterprise Education Publisher – Salesforce CRM & Apttus CPQ (R2: US Higher Education)

Accenture Education Publishing 2015–2016

ROLES

Business Analyst CPQ Specialist UAT Lead

BUSINESS CONTEXT / PROBLEM

The client, one of the world's largest education publishers, was undertaking a massive global CRM and CPQ transformation affecting 2M+ product SKUs across its Higher Education division. The program was mid-flight when Betsy joined, with existing complexity around a massive product catalog, curriculum browsing for professors, and bookstore order influence.

WHAT BETSY DID

Hired specifically for Salesforce and Apttus CPQ expertise, Betsy onboarded mid-program to troubleshoot, test, and stabilize the US Higher Education CPQ solution. She identified critical defects that were blocking the program's critical path — defects that the development team had not caught. She enabled the professor curriculum browsing and bookstore order influence workflow and contributed to UAT across the release.

BUSINESS OUTCOMES

- Critical-path defects identified and resolved, preventing significant program delay
- US Higher Ed CPQ solution stabilized and released on schedule
- Professor curriculum browsing and bookstore order influence workflow functional and live
- Established Betsy's reputation as a defect pattern recognition expert across Accenture programs

KEY METRICS

\$50M+ program 60+ person team 2M+ product SKUs Critical path unblocked

Accenture Dreamforce Event Management Solution

Accenture

Technology Consulting (Internal)

2015

ROLES

Solution Designer

Co-Builder

BUSINESS CONTEXT / PROBLEM

Accenture needed a custom event management solution for its presence at Salesforce Dreamforce — one of the largest enterprise technology conferences in the world. Managing RSVPs, attendee check-in, session capacity, and lead capture with standard off-the-shelf tools was insufficient for Accenture's scale and branding requirements.

WHAT BETSY DID

Betsy co-designed and built a complete QR code and lead management solution within Salesforce: RSVP tracking, QR code generation and distribution, real-time check-in control, and capacity enforcement. The 2-person team delivered a working solution end-to-end.

BUSINESS OUTCOMES

- Custom Dreamforce attendee management solution built and deployed on schedule
- Contributed to Accenture's Dreamforce presence and additional business secured at the event
- Demonstrated ability to design and build independently with minimal resources

Global Enterprise Education Publisher – Global CPQ Process Design & Quoting Model (R3: UK, AU/NZ)

Accenture

Education Publishing

2016

ROLES

CPQ Lead

Global Process Design Lead

BUSINESS CONTEXT / PROBLEM

Following the successful US Higher Ed release, the company needed to extend its CPQ transformation globally — designing a quoting model that could support UK and AU/NZ markets with different curriculum structures, pricing models, and regulatory considerations. The global expansion required a unified set of standards and guiding principles that would govern all future market releases.

WHAT BETSY DID

Betsy led the 12-week global CPQ design engagement. She conducted 25+ stakeholder surveys across US, UK, and AU/NZ markets to surface requirements, constraints, and exceptions. She defined global standards and guiding principles governing quoting logic, product hierarchy, and pricing rules that would serve as the foundational design for all subsequent global rollouts.

BUSINESS OUTCOMES

- Global CPQ design standards and guiding principles defined — governing all future market releases
- 25+ stakeholder surveys executed across 3 geographies, synthesizing diverse requirements into unified design
- Foundation established for UK, AU/NZ, and future international market launches
- Design handed off and successfully used as blueprint for R4 and R5 releases

Global Enterprise Education Publisher – Variable Pricing Engine & Integration Design (R4)

Accenture

Education Publishing

2016–2017

ROLES

CPQ Capability Lead

Pricing Architect

Integration Lead

BUSINESS CONTEXT / PROBLEM

The company's 2M+ ISBN catalog presented an unprecedented pricing challenge: each product had variable attributes that determined its price, and the existing pricing approach relied on manual Excel-based processes that were untenable at global scale. The integration layer connecting CRM/CPQ to Oracle ERP and the Datahub master data management system needed to be designed with precision to ensure pricing accuracy and data integrity downstream.

WHAT BETSY DID

Betsy designed and built an 8-tab, 200+ formula variable attribute-based pricing engine for the 2M+ ISBN catalog. She designed Informatica integrations to Oracle ERP and the Datahub MDM system; coordinated with competitive vendors managing overlapping workstreams; and traveled in-person to UK and AU for hands-on UAT execution, catching defects that local teams had missed.

BUSINESS OUTCOMES

- 8-tab, 200+ formula pricing engine built — rationalized 2M+ ISBN variable pricing into automated, scalable logic
- Informatica integration design to Oracle ERP and Datahub MDM — clean downstream data flow achieved
- In-person UAT in UK and AU resulted in defects caught and resolved before go-live
- Competitive multi-vendor coordination navigated successfully, maintaining program timeline

Global Enterprise Education Publisher – US K-12 Business Unit Rollout (R5 – Final Release)

Accenture

Education Publishing

2017

ROLES

CPQ Capability Lead

Team Lead

BUSINESS CONTEXT / PROBLEM

The final release of the company's global CPQ program extended the solution to the US K-12 business unit. This lift-and-shift approach required adapting the established CPQ design to K-12 product and pricing structures while managing a multi-resource team across onshore and offshore locations — closing out a multi-year, \$50M+ Accenture engagement.

WHAT BETSY DID

Betsy served as CPQ Capability Lead for R5, designing product and pricing integration architecture for automated data feeds into the K-12 business unit. She managed a team of 3 functional, 1 technical onshore, and 3 offshore resources — her first formal team management experience — coordinating delivery across time zones and ensuring UAT quality before go-live.

BUSINESS OUTCOMES

- US K-12 CPQ solution successfully launched — final release of \$50M+ program closed
- Automated data feeds for product and pricing established, eliminating manual K-12 pricing inputs
- First formal team management experience: 7 resources across onshore and offshore
- Multi-year Accenture engagement successfully concluded

Global Data Analytics Technology Company – Offering to Cash Business Process Discovery

Accenture

Data Analytics / Technology

~2017

ROLES

Process Design Lead

O2C Discovery Lead

BUSINESS CONTEXT / PROBLEM

The client, a global data analytics leader, needed a comprehensive Offering-to-Cash (O2C) business process discovery to understand its current state, identify gaps, and define a best-in-class future state before undertaking a major transformation program. The discovery needed to be rigorous enough to hand off to a subsequent implementation team.

WHAT BETSY DID

Betsy led the 12-week O2C discovery engagement end-to-end. She delivered Best-in-Class O2C Level 3 process flows, business scenarios, offering models, and comprehensive business rules documentation. The full package served as the foundation for the transformation program handed to the next Accenture team.

BUSINESS OUTCOMES

- Best-in-Class O2C L3 process flows delivered — covering full Offering-to-Cash lifecycle
- Business scenarios, offering models, and business rules documented in handoff-ready package
- Discovery scoping enabled the next implementation team to begin transformation without re-discovery
- 12-week discovery executed and closed on schedule

Global Consumer Goods / CPG Company (Netherlands) – CRM/CPQ & MDM/Data Migration

Accenture

Consumer Goods / CPG (Netherlands)

2017–Aug 2018

ROLES

MDM & Data Migration Lead

CPQ Lead

Cross-functional QA Architect

BUSINESS CONTEXT / PROBLEM

The client, a global coffee and tea company, was mid-implementation on a \$60M+ CRM/CPQ and data program originally initiated by a competitor consulting firm. The program was in distress — the existing implementation had left the data model undefined, legacy data uncleaned, and integration architecture incomplete. Accenture was brought in to rescue and take over.

WHAT BETSY DID

Betsy took ownership of the data model definition, legacy data cleanup, and migration file preparation. She designed the CPQ solution for the company's European quoting model and served as QA architect across all workstreams — ensuring data flowed correctly through 12 integrations from source systems to Force.com. She also managed global considerations for the Netherlands-based rollout.

BUSINESS OUTCOMES

- Distressed program rescued and stabilized — competitor-initiated implementation taken over and redirected
- Future-state data model defined from scratch, enabling all downstream CPQ and integration work
- 12 integrations from source to Force.com designed and QA'd — data integrity verified end-to-end
- Legacy data cleanup and migration files prepared, enabling clean cutover
- Cross-workstream QA architecture prevented downstream defects across the full \$60M+ program

CentralSquare Technologies – Lead to Cash & M&A Integration

Vista Equity Partners

GovTech / Public Safety Technology

Aug 2018–2019

ROLES

Lead to Cash SME

CPQ/CLM Lead

M&A Process & Data Integration Lead

BUSINESS CONTEXT / PROBLEM

CentralSquare Technologies was created by Vista Equity Partners and Bain Capital through the merger of Superion, TriTech, and Zuercher Technologies — three separate public safety software companies. Post-merger, the combined company had fragmented data models, inconsistent GTM processes, and multiple product lines with no unified CPQ or CLM architecture. Betsy was brought in as part of Vista's BOSS (Best-of-Breed Operating Standards) practice to design the Lead-to-Cash process foundation.

WHAT BETSY DID

Betsy designed Vista BOSS-standard L3 process flows for the unified entity. She led M&A data and process unification work across the merged product lines, defined account and product hierarchy for the combined customer and product master, designed CPQ and CLM functional architecture, and facilitated stakeholder workshops to align Sales, Finance, and IT across the newly merged business units.

BUSINESS OUTCOMES

- Unified Lead-to-Cash process foundation designed for merged 3-company entity
- Vista BOSS L3 process flows (trademarked) delivered — reusable across portfolio
- Account and product hierarchy defined, enabling unified customer and product master post-merger
- CPQ/CLM functional design established for the largest CAD/RMS market share holder in public safety tech
- M&A data and process integration facilitated across Superion/TriTech/Zuercher product lines

IAS (Integral Ad Science) – Lead to Cash & M&A Support

Vista Equity Partners

AdTech / Digital Advertising Measurement

Aug 2018–2019

ROLES

Lead to Cash SME

CPQ/CLM Lead

M&A Integration Support

BUSINESS CONTEXT / PROBLEM

Integral Ad Science (IAS), a digital advertising measurement company, was acquired by Vista Equity Partners in 2018. The business needed a robust Lead-to-Cash infrastructure to support its growth trajectory and prepare for the investor reporting and operational transparency required by a PE-owned SaaS company — including ARR tracking, customer retention, and account hierarchy management needed for exit readiness.

WHAT BETSY DID

Betsy designed Vista BOSS Lead-to-Cash process flows for IAS, led CPQ/CLM functional design, defined foundational data model elements (account hierarchy, product hierarchy), built proprietary ARR tracking and customer retention reporting models, and provided M&A integration support during IAS's active acquisition activity. She architected the models that directly supported investor reporting and eventual exit readiness.

BUSINESS OUTCOMES

- Foundational ARR tracking and retention reporting models built — directly supported investor reporting
- Vista BOSS CPQ/CLM process flows deployed, enabling scalable Lead-to-Cash at PE-grade standards
- Account and product hierarchy defined, enabling unified CRM and billing data
- IAS growth trajectory supported: Vista exit value grew from ~\$850M to \$1.9B (Novacap acquisition 2025)
- M&A integration support provided during IAS's expansion phase

iCIMS – Marketo, Salesforce, CPQ, Conga, NetSuite Full-Stack Implementation

Vista Equity Partners

HR Tech / Talent Acquisition

2018–2019

ROLES

CPQ/CLM Functional Lead

Project Coordinator

BUSINESS CONTEXT / PROBLEM

iCIMS, a leading talent acquisition software platform in Vista's portfolio, was managing its entire quoting and pricing operation through 6 separate Excel spreadsheets — an operationally fragile, manually intensive, and error-prone approach that was completely unscalable for a PE-backed SaaS company preparing for growth. The company also needed a full technology stack refresh across marketing automation (Marketo), CRM (Salesforce), CPQ (Salesforce CPQ), CLM (Conga), and ERP (NetSuite).

WHAT BETSY DID

Betsy led the CPQ/CLM functional design and delivery across the full-stack implementation. She eliminated the 6-Excel-sheet manual pricing process by designing automated product configuration and pricing logic in Salesforce CPQ. She oversaw the Conga CLM implementation, NetSuite integration, and Marketo marketing automation deployment — coordinating QA across the full Salesforce and Conga solution.

BUSINESS OUTCOMES

- 6 Excel-based manual pricing processes eliminated — fully automated in Salesforce CPQ
- Salesforce CPQ, Conga CLM, NetSuite integration, and Marketo fully implemented and live
- iCIMS positioned for scalable, system-governed quoting with audit-grade pricing controls
- TA Associates joined Vista as equal co-investor in 2022 — signal of continued confidence in value trajectory

VISTA ACQUIRED \$1.94B → IBM ACQUIRED AT \$4.6B (AUG 2023; ~142% RETURN IN 4.5 YEARS)

Apptio – Lead to Cash & CPQ/CLM Implementation

Vista Equity Partners

FinOps / Technology Business Management

2019–May 2020

ROLES

Lead to Cash SME

CPQ/CLM Lead

Process Design Lead

Data Migration Strategist

BUSINESS CONTEXT / PROBLEM

Apptio, a Technology Business Management (FinOps) software company, was taken private by Vista in January 2019 at \$1.94B. As part of Vista's post-acquisition value creation program, Apptio needed a robust Lead-to-Cash infrastructure including CPQ/CLM design, a data migration strategy that could support \$500M+ in recurring revenue automation, and ASC606-compliant subscription management architecture. The work needed to be exit-ready.

WHAT BETSY DID

Betsy designed Vista BOSS L3 process flows for Apptio's Lead-to-Cash, led CPQ/CLM design, and introduced a proprietary data migration methodology that enabled automated CPQ renewal processes for \$500M+ in recurring revenue. She designed ARR tracking and subscription management models, built ASC606-compliant variable consideration handling, and created customer retention reporting models that directly supported investor reporting and exit due diligence.

BUSINESS OUTCOMES

- Proprietary data migration methodology introduced — enabled automated renewal processing of \$500M+ recurring revenue
- ARR tracking and customer retention reporting models built — directly informed exit due diligence
- ASC606-compliant variable consideration methodology implemented for subscription management
- Apptio sold to IBM for \$4.6B in August 2023 — ~142% return (~2.4x) in 4.5 years
- Betsy's process design and data work directly contributed to operational excellence supporting the IBM exit

TIBCO Software – Salesforce Billing & Order Integration Re-architecture

TIBCO Software

Enterprise Software / Technology (Internal IT)

Jun 2020–Jan 2021

ROLES

Lead Business Solution Architect

BUSINESS CONTEXT / PROBLEM

TIBCO Software, an enterprise integration and analytics company, had a broken Salesforce Billing/Order integration that was creating persistent manual intervention requirements — order errors were falling out of automated processing and requiring human correction, creating operational drag for Sales Ops, Accounting, and Revenue teams. The integration also lacked front-end visibility into billing and payment status.

WHAT BETSY DID

Betsy re-architected the existing Salesforce Billing/Order integration end-to-end. She designed front-end billing and payment visibility into the system, automated the order error re-processing logic to eliminate manual intervention, and designed the cross-functional solution spanning sales, sales ops, accounting, and revenue teams. She also troubleshooted and resolved active production issues during the engagement — a high-stakes, highly visible role.

BUSINESS OUTCOMES

- Manual order error correction processes eliminated — system auto-corrects and re-processes errors
- Front-end billing and payment visibility added — sales and accounting teams can self-serve status
- Cross-functional solution aligned Sales, Sales Ops, Accounting, and Revenue around a unified integration architecture
- Production issues troubleshooted and resolved during engagement, preventing revenue recognition delays
- Lateral move during COVID that deepened Betsy's solution architecture and trusted advisor skill set

Leading DevOps / IT Operations SaaS Platform – Order Management to Collections BPD

PwC

DevOps / IT Operations (SaaS)

Early 2021

ROLES

Lead Counterpart

Process Design Lead

BUSINESS CONTEXT / PROBLEM

The client, a leading DevOps and IT incident management SaaS platform, needed a structured Order Management to Collections business process design to align its Lead-to-Cash operations with growth-stage requirements. The engagement required a clear future-state design that could be handed to an implementation team without re-work.

WHAT BETSY DID

Betsy served as lead counterpart on the 4-person PwC team, leading the 8-week O2C future-state design from order management through collections. She produced discovery and scoping deliverables covering all Lead-to-Cash process domains and successfully handed off a clean, implementation-ready package to the delivery team.

BUSINESS OUTCOMES

- 8-week O2C BPD engagement delivered on schedule with complete process documentation
- Implementation-ready handoff package produced — zero re-discovery needed
- Lead counterpart performance positioned Betsy for larger, more complex PwC engagements
- The company's Lead-to-Cash future state defined and ready for execution

Global Telehealth & Virtual Healthcare Company – Lead to Cash BPD → \$50M+ Implementation Win

PwC

Healthcare / Telehealth

2021–2022

ROLES

Lead to Cash Process Design Lead

Implementation Support

BUSINESS CONTEXT / PROBLEM

The client, a global telehealth and virtual healthcare leader, needed a comprehensive Lead-to-Cash business process design before undertaking a major Salesforce implementation and back-office systems redesign. The engagement was high-stakes: PwC's ability to win the subsequent multi-year implementation contract depended on delivering a BPD that demonstrated clear command of the client's operational complexity and Salesforce capability.

WHAT BETSY DID

Betsy led the 12-week Lead-to-Cash BPD engagement, leveraging and significantly expanding prior process design work to deliver go-forward system requirements covering the client's complex hybrid healthcare/technology business model. The delivery directly secured the follow-on scope. She then supported the 10-person implementation team through the delivery phase.

BUSINESS OUTCOMES

- \$50M+ multi-year Salesforce implementation and back-office systems redesign won — BPD performance directly drove the win
- 12-week BPD delivered with go-forward system requirements covering full Lead-to-Cash lifecycle
- Transitioned from BPD delivery to implementation support on 10-person team
- Betsy recognized for expanding PwC's relationship with Teladoc beyond the initial engagement

IMPLEMENTATION ENGAGEMENT

Global Technology Company (Construction & Transportation) – Lead to Cash Implementation (Revenue Cloud)

PwC

Technology / Construction / Transportation

2022–2023

ROLES

Lead to Cash Lead

Solution Architect

BUSINESS CONTEXT / PROBLEM

The client, a global technology company serving construction, agriculture, and transportation markets, needed a full Lead-to-Cash implementation with a specific requirement: expand into Salesforce Billing (Revenue Cloud) for the first time — adding subscription and usage billing capability to its existing CPQ solution. The integration layer connecting to MuleSoft and Informatica was critical to ensuring billing accuracy and downstream ERP alignment.

WHAT BETSY DID

Betsy served as Lead to Cash Lead and Solution Architect, taking hands-on responsibility for Salesforce Billing (Revenue Cloud) implementation — expanding her toolkit beyond CPQ into billing for the first time in a delivery capacity. She designed MuleSoft and Informatica integration architecture and served as cross-system QA lead ensuring dependencies across CPQ, Billing, and ERP were managed cleanly.

BUSINESS OUTCOMES

- First hands-on Salesforce Billing (Revenue Cloud) implementation delivered — expanded Betsy's technical depth into billing
- MuleSoft and Informatica integration architecture designed and live
- Cross-system QA architecture ensured dependency management across CPQ, Billing, and ERP layers
- The company's Lead-to-Cash modernized with subscription and usage billing capability

Global Specialty Chemicals & Advanced Materials Manufacturer – Salesforce CPQ & SAP Integration Redesign

PwC Specialty Chemicals / Manufacturing (NA + Global Asia) 2023

ROLES

CPQ/SAP Lead Solution Architect

BUSINESS CONTEXT / PROBLEM

The client, a global specialty chemicals and advanced materials company, had a Salesforce CPQ and SAP integration that could not handle its highly variable, ever-changing pricing model — including metal commodity pricing that fluctuated based on market conditions. The existing architecture was brittle under pricing changes and had no scalable solution for the NA and Global Asia business units operating under different pricing structures.

WHAT BETSY DID

Betsy redesigned the Salesforce CPQ and SAP integration architecture to support the company's variable and ever-changing metal commodity pricing model. She designed the pricing logic to accommodate ongoing market-driven updates without requiring re-implementation, aligned NA and Global Asia BU requirements into a unified architecture, and drove the solution through to a successful go-live.

BUSINESS OUTCOMES

- Salesforce CPQ and SAP integration successfully redesigned and went live — last project before Slalom
- Variable metal commodity pricing fully supported in CPQ without fragile workarounds
- NA and Global Asia BU requirements unified into single architecture
- System-governed pricing changes enabled — eliminating manual pricing updates for market-driven fluctuations

Slalom – Salesforce Billing Accelerator

Slalom Technology Consulting / SaaS Jun 2023–Jun 2024

ROLES

Solution Architect Accelerator Designer

BUSINESS CONTEXT / PROBLEM

Slalom's Revenue Cloud practice needed a repeatable, configurable implementation accelerator to reduce the time and cost for enterprise clients adopting Salesforce Billing. Individual engagements were rebuilding the same foundational components from scratch, creating delivery inefficiency and reducing the practice's competitiveness on billing-related pursuits.

WHAT BETSY DID

Betsy architected and built the Salesforce Billing implementation accelerator — designing configurable components that covered the most common Revenue Cloud implementation patterns. The accelerator was built for repeatability across client engagements and directly reduced the engineering time required to stand up billing capability for new clients.

BUSINESS OUTCOMES

- Salesforce Billing implementation accelerator built — reusable across multiple client engagements
- Implementation timelines reduced for enterprise companies adopting Revenue Cloud
- Slalom's Revenue Cloud delivery practice enhanced with repeatable, configurable asset
- Betsy's expertise in billing architecture institutionalized as practice-level intellectual property

KEY METRICS

Healthcare Company – Nasdaq Relisting Initiative

Slalom

Healthcare / Capital Markets

2023–2024

ROLES

Strategic Operator

Quote-to-Revenue SME

BUSINESS CONTEXT / PROBLEM

A healthcare company had been delisted from Nasdaq and was undertaking a post-delisting recovery and operational restructuring to achieve relisting. The company had limited alignment between its financial reporting, operational systems, and execution against the requirements needed to satisfy relisting criteria — a high-stakes environment where operational credibility directly affected the company's ability to return to public markets.

WHAT BETSY DID

Betsy served as Strategic Operator and Q2R SME, supporting the restructuring by aligning operational systems with financial reporting requirements. She built frameworks connecting system outputs to performance tracking and relisting readiness, coordinating across the CTO, Finance, and IT stakeholders to create visibility into performance drivers and a structured approach to financial reporting.

BUSINESS OUTCOMES

- Operational systems aligned with financial reporting and regulatory relisting requirements
- Performance tracking frameworks built — connecting system outputs to relisting readiness indicators
- Cross-stakeholder coordination achieved across CTO, Finance, and IT in a high-pressure environment
- Improved visibility into performance drivers; structured approach to financial reporting established
- CTO relationship built — 'Whoever put Betsy on this project is a genius'

High Tech / SaaS

2023–2024

ROLES

GTM Advisor

CPQ/Billing Enablement Lead

BUSINESS CONTEXT / PROBLEM

A global technology company needed to launch new products requiring usage-based pricing — a monetization model its existing systems were not equipped to support. The company's product, pricing, and billing systems were misaligned, making it impossible to launch usage-based revenue without significant architectural redesign. The business outcome was clear: enable new revenue-generating products and bring them to market.

WHAT BETSY DID

Betsy designed and implemented the usage-based billing and pricing model architecture, aligning product structures, pricing logic, and billing workflows end-to-end. She worked cross-functionally with Product, Pricing, Finance, and Billing teams to ensure the new pricing model was launch-ready, establishing a scalable framework that could support future usage-based product expansion.

BUSINESS OUTCOMES

- Usage-based billing and pricing models designed and implemented — new product monetization enabled
- New revenue-generating products launched with usage-based pricing live
- Scalable usage-based pricing framework established for future product expansion
- Cross-functional alignment achieved across Product, Pricing, and Billing
- Slalom Partner received consistent positive feedback from the client about Betsy's leadership

Manufacturing / Industrial

2023–2024

ROLES

CPQ/CLM Functional Lead

BUSINESS CONTEXT / PROBLEM

A global manufacturing company had fragmented quoting, pricing, and contracting processes with heavy reliance on manual workflows and inconsistent pricing logic across its sales, finance, and operations teams. The manual processes were creating deal inaccuracies, slowing execution speed, and preventing consistent pricing governance — a particularly acute problem for a manufacturer with complex, configurable product offerings.

WHAT BETSY DID

Betsy redesigned quoting and contracting workflows across CPQ and CLM, configuring pricing logic, product models, and approval workflows from scratch. She led stakeholder alignment workshops across Sales, Finance, and Operations, and drove the design through to implementation — delivering a fully system-governed Q2R process that eliminated manual pricing dependencies.

BUSINESS OUTCOMES

- Manual pricing processes eliminated across multiple tools — system-driven workflows live
- Deal accuracy improved — consistent pricing logic enforced across all quoting scenarios
- Execution speed improved through streamlined approval and contracting workflows
- Consistent pricing governance enabled — audit-grade controls on all deals
- VP of the client team recognized Betsy's contributions as exceptional

AI Operator

BUSINESS CONTEXT / PROBLEM

PE-backed and mid-market SaaS companies consistently struggle with the same Q2R leakage scenarios — misconfigured pricing, broken renewal logic, billing gaps, siloed GTM systems — yet most lack the internal expertise or bandwidth to diagnose them quickly. Traditional consulting engagements are expensive and slow. Betsy built SaltBasin HOS (Highway Operating System) to apply her 13 years of CPQ/CLM/RevOps expertise at AI-native speed and cost.

WHAT BETSY DID

Betsy designed and built SaltBasin HOS (Highway Operating System) as an AI-native Q2R diagnostic and intelligence layer. Core design elements: a flat-fee data readiness assessment as the foot-in-door offering; an 8-scenario Q2R leakage library with benchmarks drawn from real enterprise engagements; an EBITDA recovery advisory framework; and deal qualification tools. Built using Claude Agent SDK and Cowork mode, with the Strategic Operator brand and palette applied throughout.

BUSINESS OUTCOMES

- AI-native Q2R diagnostic tool built, encapsulating 13 years of enterprise CPQ/CLM expertise
- 8-scenario leakage library with real benchmarks — provides PE-grade diagnostic depth at AI speed
- Flat-fee assessment model designed to lower the barrier for PE-backed SaaS companies to engage
- Salt Basin Net Works positioned as a Strategic Operator practice with AI-native capability differentiator

AI Operator

BUSINESS CONTEXT / PROBLEM

Real estate PE advisory firms (e.g., Aharonoff Investments) need to efficiently score and qualify distressed property opportunities across a large pipeline — identifying which underutilized assets warrant deeper diligence and capital deployment. Traditional approaches are manual, time-consuming, and subjective. Betsy's accounting background, financial modeling capability, and first-principles thinking made this an ideal AI application.

WHAT BETSY DID

Betsy designed and built an AI-powered distressed property scoring tool under Salt Basin Net Works. The tool applies financial analysis frameworks to surface underutilized asset pipeline opportunities, qualifies properties against investment criteria, and provides a structured scoring output that supports real estate PE advisory conversations. Developed as part of Betsy's positioning for real estate investment advisory roles.

BUSINESS OUTCOMES

- AI-powered property scoring tool built — first-principles financial analysis applied to real estate
- Positions Betsy credibly for real estate PE advisory roles with a live, demonstrable capability
- Demonstrates AI Operator skill set applied to a new industry vertical
- Cover letter to Aharonoff Investments backed by actual AI-built tool, not just narrative

SaltTide CHI (Credit Health Infrastructure) – Investor Advisory Tool

Salt Basin Net Works

Financial Services / AI

2024–Present

ROLES

Founder

AI Operator

BUSINESS CONTEXT / PROBLEM

Investor advisory interactions require absolute precision in language — the difference between 'this investment has performed well' and 'this investment has outperformed its benchmark by X% on a risk-adjusted basis' is legally and reputationally material. Betsy built SaltTide CHI (Credit Health Infrastructure) to provide structured, investor-grade Q&A capability with legally precise language standards baked into the tool's core design.

WHAT BETSY DID

Betsy designed and built SaltTide CHI (Credit Health Infrastructure) as an AI-powered investor Q&A and advisory tool with legally critical language standards. The tool is designed to produce structured, investor-grade analysis with language precision required for PE and investment advisory contexts. Built under Salt Basin Net Works as part of the broader AI Operator positioning.

BUSINESS OUTCOMES

- AI-powered investor advisory tool built with legally precise language standards
- Structured investor-grade Q&A capability — language precision enforced by design
- Expands Salt Basin Net Works' AI tool portfolio into financial advisory
- Demonstrates AI Operator depth in high-compliance, legally sensitive domain
